

## Questions for junior school:

Where in Norway is the Ormen Lange field?

The Ormen Lange field consists of something we call natural gas. Is natural gas found anywhere else? (Hint: Think of cows!)

Natural gas is a form of energy. We get the energy from the gas by lighting it, so that it burns. It can make water boil, for example. Can you name other ways of making energy?

Ormen Lange is also the name of a ship. What sort of ship was it, and who owned it?

Before we could build Ormen Lange, we had to make some archeological excavations. Can you describe some of the historical things they found? (Hint: Look at the Science Museum webpage).

Many people who work in the oil industry have an engineering qualification. How do you become an engineer? And what do engineers actually do? Name at least three things that engineers can do.
