

Questions for middle school:

How is natural gas formed?

How do you find oil and gas far below the seabed?

At the Ormen Lange Onshore Facilities at Nyhamna, the gas is landed and "processed" before it is ready for use in Great Britain. Can you describe what happens to the gas at Nyhamna?

There are also liquids in the gas from the reservoir. Describe the liquids in the well-stream, and describe what happens to them when they reach Nyhamna.

How do you get energy from gas?

Can you name more energy sources, and describe how they work?

In the oil industry there are many engineers. How do you become an engineer? And what do engineers actually do? Give examples of engineering tasks on the Ormen Lange field.
